    <h1>Front-End Web Development</h1>
    <p>Front-End Web Development involves designing and building user interfaces of websites using HTML, CSS, and JavaScript. It focuses on creating visually appealing, interactive, and user-friendly websites. Front-end developers ensure accessibility, performance optimization, and adherence to web standards, blending creativity with technical expertise.</p>
    <section>
      <h2>HTML</h2>
      <p>HTML, or HyperText Markup Language, forms the backbone of web pages by defining their basic structure and layout. It uses a series of elements to display text, images, lists, tables, and other static content on a web page.</p>

      </iframe>
    </section>
    <section>
      <h2>CSS</h2>
      <p>CSS, or Cascading Style Sheets, is used to control the visual presentation of HTML elements on a web page. It allows for customized styling, including colors, fonts, layouts, and spacing, making websites visually appealing. CSS also supports responsive design, ensuring web pages look good on all devices.</p>

    <section>
      <h2>JavaScript</h2>
      <p>JavaScript is a programming language that adds interactivity to static web pages, enabling dynamic content updates, form validations, animations, and responsive behaviors based on user interactions and events.</p>
